1. Scope of Learning

Supply, installation, and commissioning of LabVolt series : Communications Technologies Training Systems 8087 in the Faculty of Engineering, KDU premises at Ratmalana. The Communications Technologies Training Systems are specifically designed for hands-on training in a wide range of communication technologies. Training starts from the basic pulse modulation techniques (PAM, PWM, PPM, PCM, DPCM, and delta modulation), covers the various digital modulation schemes used in data transmission (ASK, FSK, BPSK, QPSK, and QAM), and extends to modern, spectrally efficient, digital communication techniques such as the asymmetric digital subscriber line (ADSL) and spread spectrum technologies (direct-sequence spread spectrum and frequency-hopping spread spectrum).

The courseware consists of a series of student manuals covering the different technologies, as well as instructor guides that provide the answers to procedure step questions and review questions. The training systems and the accompanying courseware provide a complete study program. **(Will be used in Communication Theory I, Introduction to Telecommunication & Communication Theory II modules at the Curriculum).**
